SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is 76%

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

Retent No. 6558240

GENERAL INFORMATION:

APPLICANT: BAINE, ELDON J.

TITLE OF INVENTION: INHIBITION OF MAJOR GROOVE DNA BINDING

TITLE OF INVENTION: PROTEINS BY MODIFIED POLYAMIDES

FILE REFERENCE: 238/296

CURRENT APPLICATION NUMBER: US/09/374,704

CURRENT APPLICATION NUMBER: PCT/US9/02684

BARLIER APPLICATION NUMBER: PCT/US97/03332

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 29, Application US/10107660

Fatent No. 6780977

GENERAL INFORMATION:

APPLICANT: Chadwick, Brian Paul

APPLICANT: Chadwick, Brian Paul

TITLE OF INVENTION: METHODS AND COMPOSITIONS RELATING TO CD39-LIKE

TITLE OF INVENTION: POLYPEPTIDES AND NUCLEIC ACIDS

FILE REFERENCE: 9598-066

CURRENT APPLICATION NUMBER: US/10/107,660

CURRENT FILING DATE: 1998-01-29

FRIOR FILING DATE: 1998-01-29

NUMBER OF SEQ ID NOS: 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-08-353-518

US-08-353-518

Sequence 518, Application US/08388353

Patent No. 6010895

GENERAL INFORMATION:

APPLICANT: Dearmont, Jennifer C. APPLICANT: McPhee, Dale A. APPLICANT: Cooper, David

TITLE OF INVENTION: NOW-PATHOCENIC STRAINS OF HIV-1

NUMBER OF SEQUENCES: 800

CORRESPONDENCE ADDRESS:

ADDRESSEE: Scully, Scott, Murphy & Presser

STREET: 400 Garden City Plaza

CITY: Garden City Plaza

CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Indels

Sequence 835, Application US/08488551B

Sequence 835, Application US/08488551B

Patent No. 015661

APPLICANT: Nicholas J. Deacon

APPLICANT: David Cooper

ITILE OF INVENTION: NON-PATHOGENIC STRAINS OF HIV-1

NUMBER OF SEQUENCES: 841

CORRESPONDENCE ADDRESS:

ADDRESSEE: SCULLY, SCOTT, MURPHY & PRESSER

STREET: 400 GARDEN CITY PLAZA

CITY: GARDEN CITY

CITY: GARDEN CITY

COUNTRY: U.S.A.
                                                    GENERAL INFORMATION:
APPLICANT: Nicholas J. Deacon
APPLICANT: Nicholas J. Deacon

TITLE OF INVENTION: IN-SITU HYBRIDIZATION PROBES FOR THE DETECTION OF
TITLE OF INVENTION: MICROSPORIDIAL SPECIES
FILE REFERENCE: EPA-C132
CURRENT APPLICATION NUMBER: US/09/954,225
CURRENT FILING DATE: 2001-09-18
PRIOR FILING DATE: 2000-09-21
NUMBER OF SEQ ID NOS: 28
SOFTWARE: PATENTING DATE: 2.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2496, Application US/09990186
Patent No. 7030215
GENERAL INFORMATION:
APPLICANT: LIU, Qiang
TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS
TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS
FILE REFERENCE: 8325-0011.21 / S11-US3
CURRENT FILING DATE: 2001-11-20
NUMBER OF SEQ ID NOS: 4085
SOFTWARE: Patentin Ver. 2.0
                         APPLICANT: LIU, Qiang
TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLECTIDE

Sequence 22, Application US/10034350A
Patent No. 6800442
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Zauderer, Maurice
TILLE OF INVENTION: Methods of Selecting Polynucleotides Encoding Antigens
FILE REFERENCE: 1821.0010002
CURRENT APPLICATION NUMBER: US 08/935,377
PRIOR FILING DATE: 1997-09-22
PRIOR FILING DATE: 1997-09-22
NUMBER OF SEQ ID NOS: 38
SOFTWARE: PatentIn version 3.1

US-09-063-450-32, Application US/09063450
Fatent No. 6109776
GENERAL INFORMATION:
FITLE OF INVENTION: Method and System for Computationally Identifying
TITLE OF INVENTION: Clusters Within a Set of Sequences
FILE REPERBNCE: 77001.002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Sequence 112, Application US/08650093C
Patent No. 6391542
GENERAL INFORMATION:
APPLICANT: Kevin P. Anderson et al.
TITLE OF INVENTION: Compositions And Methods For Treatment
Hepatitis C Virus-Associated Diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ZIP: 08053

COMPUTER READABLE FORM:
    MEDIUM TYPE: DISKETTE, 3.5 INCH, 1.44 Mb STORAGE COMPUTER: IBM Compatible
    OPERATING SYSTEM: Windows 95
    SOFTWARE: WORDPERFECT 6.1 for Windows
    CURRENT APPLICATION DATA:
    APPLICATION NUMBER: US/08/650,093C
    FILING DATE: 17-May-1996
    CLASSIFICATION: <UNknown>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Indels
                                                                                                                                                                                                                                                                                Indels

| TILLE OF INVENTION: Method for Synthesizing CDNA from mRNA sample FILE RERERENCE: 00162/HG
| CURRENT APPLICATION: NUMBER: US/09/508,753B
| CURRENT FILING DATE: 2000-06-16
                                                                                       RESULT 139
US-09-598-326-100/c
1 Sequence 100, Application US/09598326
1 Patent No. 6423496
1 GENERAL INFORMATION:
2 Smith, John M.
3 Smith, John M.
1 TILE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: COMPOSITIONS OF BREAST CANCER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                           STREET: 701 Fifth Avenue, Suite 6300 CITY: Seattle
                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: Inah PC compatible
COMPUTER: Inah PC compatible
OPERATION SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATE: US/09/598,326
FILING DATE: 20-Jun-2000
CLASSIFICATION : CURROWAL
APPLICATION : CURROWAL
NAME: POTTER, Jane E.R.
REGISTRATION NUMBER: 33,332
REPERANCE/DOCKET NUMBER: 210121.419D1
TELEPANE: (206) 622-4900
TELEPANE: (206) 622-4900
